Mr. Alexander Gilman, Primary Examiner  
USPTO  
Alexandria, VA 22313-1450

Dear Sir:

This responds to your telephone request of 12/10/2004 to submit an informal response so as to shorten the current Abstract. Accordingly, please replace the current Abstract with the following substitute Abstract:

ABSTRACT OF THE INVENTION

An electrical wiring assembly comprises a wiring panel and an electrical module. The wiring panel has a front side and a back side and is installable within an electrical box. The electrical module has a front cover and a back cover, and the front cover provides a user accessible electrical function. Panel fixtures extend generally perpendicularly from the front side of the wiring panel and shield panel contacts. Breakaways are configured to be removable so as to isolate a first portion of the panel contacts from a second portion of the panel contacts. Module fixtures extend generally perpendicularly from the back cover of the electrical module and shield module contacts. The module fixtures are configured to engage the panel fixtures so as to electrically connect the module contacts with the panel contacts.

Please call the attorney of record at the number indicated below if there are any further issues.

Respectfully submitted,

LAW OFFICE OF GLENN R. SMITH
